**Thornberry Large Patient Hip Positioner**

**Designed by Robert L. Thornberry, MD**

**Designed to be adjustable yet sturdy when stabilizing a large patient for hip surgery**

The Thornberry Large Patient Hip Positioner is used for stable positioning of a large patient during total hip and revision surgery. It is designed to attach directly to the operating table utilizing existing table clamps, or the Innomed #2595 Table Clamps which are not included.

The upper arm assembly can be adjusted for height. Both arms include a push-button to allow the pad platform to swivel and lock into any of three fixed positions. The tall 18” post also includes a push-button to allow the post/arms unit to swivel and lock into any of three fixed positions.

The complete unit is autoclavable except for the foam pads. The pads are made of semi-dense foam to help prevent pressure points and are sealed with a washable coating. The coating also helps to lessen the possibility of skin breakdown.

It may be necessary to place the Double Table Attachment(s) 180°—sticking out from the table—to accommodate the large patient, as shown at left.
