

# O'Reilly Femoral Head Extractor

Designed by Michael P. O'Reilly, MD  
Small version designed modification by Tarun Bhargava, MD

*Designed to help remove the femoral head—during THA, MIS Direct Anterior THA, and hip fracture surgery/hemiarthroplasty*

The perpendicular osteotome blades help provide purchase in osteoporotic bone, while the central osteotome provides a visual estimate of the instrument's depth of penetration to avoid acetabular injury with use during hemiarthroplasty.

The handle helps obtain rotational torque needed to rotate and dislocate the femoral head in direct anterior hip arthroplasty.
